

MICROBLADING POST-CARE

Taking proper care of your eyebrows following your procedure is one of the most important steps in achieving your dream brows. Please fully read the instruction below and contact Microblading OKC with any questions.

- Keep the brow area clean by using a natural fragrance-free gel cleanser (such as Cetaphil) and water. Hands must be freshly clean. Avoid use of abrasive washcloths or sponges.
- Gently pat eyebrows dry or allow them to completely air dry before applying ointment. Apply the aftercare ointment given (for the amount of days recommended by your artist) with freshly washed hands or a Q-Tip.
- Do not rub, pick or scratch the treated area. Let any scabbing or dry skin naturally exfoliate off. Picking can cause scarring and pigment loss!
- Completely avoid direct sun exposure and tanning beds for a minimum of four weeks after your procedure. Direct sunlight can cause the pigment to change color while it is healing and can also cause hyperpigmentation and scarring.
- Avoid pools, saunas, steam rooms, hot showers and hot baths for three weeks following your procedure.
- Avoid excessive sweating for 10 days following your procedure. Any physical effort or activity which may cause sweating on the brows (gym, hot weather, etc.) will expel pigment from the dermis and produce poor results.
- Avoid sleeping on your face for 10 days following your procedure.
- Keep your bangs and hair pulled back from your face for 10 days following your procedure.

- No makeup or skincare products should be used on the treated area for two weeks following your procedure.
- No facials, chemical treatments or microdermabrasion for four weeks following your procedure.
- No Botox for four weeks following your procedure. We recommend waiting until after your touch up heals to get Botox, as an educated injector will take your new brows into consideration when choosing where to inject.
- After 10 days, once the area has healed completely, consider using sunblock when going out in the sun to stop the color from fading.
- Eyebrow tinting should not be undertaken for two weeks after your procedure.
- Avoid Retin-A, chemical peels and microdermabrasion around the brow area once healed.

Please note: Eyebrows will appear darker and bolder for the first two weeks due to natural healing. This is very common for all permanent cosmetic procedures.
